Single Hung

The Comfort Series model 6100 single hung is a new generation window for Gerkin. After a decade of proven performance with our single hung, we found a way to make it even better! Here at Gerkin, we only make changes in our products to ensure better performance.

We believe our customers want a great value of quality and price. That's why we build our windows to perform among the best in the industry.

For more information about Comfort Series® vinyl windows and doors visit gerkin.com.

Double Hung

If you're looking for a lot of ventilation, but don't want to sacrifice performance, take a good look at the Comfort Series 4800 double hung. The 4800 is quite possibly the tightest double hung made today.

Our double hung features a patented "candy cane" operating jamb stop which seals the ends of the interlock rail and the face of the lower sash with perfection! No other double hung has it. To compliment this patented performance, we have included three or more weather seals in every area where the sash makes a connection with the frame, including the interlock.

COMFORT SERIES®

Casement

When you're looking for the best of the best, the Comfort Series 4300 casement windows can't be beat! These windows perform and are rated at the top of our industry for air infiltration, structure and water performance. Our casements are tighter than some of our competitors' fixed windows.

One of the most important features of a casement window is the operating mechanism, so we installed roto crank hardware with unbelievable leverage and power. The 4700 fixed window complements the 4300 casement as a stand alone fixed window or can be used to mull fixed and specialty shapes to create custom configurations.

For more information about Comfort Series® vinyl windows and doors visit gerkin.com.

Slider

We are known for building the best sliding windows on the market. With our long history of building this style window, we have perfected the performance of this window to the envy of our competition. The 6000 slider is tighter than many of our competitors' best performing casement style windows!

No other style window can offer the overall value in performance and cost. The 6000 slider is our most value-priced window, but offers terrific performance with an incredibly low .04 air infiltration rate.

Sliding Glass Patio Doors

The Comfort Series 4400 sliding glass door combines innovative styling and engineering for superb performance and good looks.

We wanted a door line that outshines all other sliding doors in weather tightness, ease of operation and long-term high performance. These doors feature unbelievable strength against the elements and are designed for maximum protection. Fixed transoms and side lites are also available for the 4400 patio doors.

Bays/Bows

If a room requires a little more space or character, Gerkin fills the need with our bay and bow windows. We offer a beautiful collection of bays and bows which complement both contemporary and traditional appearances. Whether it's for a large living room, a breakfast nook or a unique bedroom window, Gerkin bays and bows offer the right touch of class! Our factory mulled bays and bows include heavy corner posts with a ready to use cable support system. They also come with natural oak or birch head and seat boards.

Gerkin bays and bows can be customized with nearly any combination of window styles for a unique look to fit nearly any house design.

COMFORT SERIES®

New Construction and Replacement Windows

Gerkin Windows and Doors is the perfect choice for any home. Whether you are building a new home or remodeling your existing home, our windows will always provide unparalleled window performance. Our windows and doors can be custom built to your exact sizes and configurations for a unique look and be designed to meet your performance requirements.

Window performance has always been a top priority for us, so no matter what kind of project our windows are used in, Gerkin is the right choice.

Specialty Shapes

One of the best ways to add flare to any project is to add special shapes. We offer numerous options in specialty shapes that can be customized and combined with other standard windows or shapes to create a stunning appearance. Along with our special shapes, we also have the ability to custom design and build internal grilles, which will offer the perfect look and character desired. With so many options available, you can get exactly what you want and need to express your personality.

Extension Jamb

Gerkin offers a unique option of wood extension jambs which can be factory applied to your windows. This offers a beautiful way to trim your windows with many different wood options. We offer solid oak, oak veneer, pine veneer, poplar veneer and paintable prime veneer; all of which are ready to be finished. For pre-finished jamb options we also include white, tan and sandstone vinyl veneer. Our veneers include waterproof adhesives on a moisture resistant composite core board which resists twisting, cupping, splitting and bowing.

For more information about Comfort Series® vinyl windows and doors visit gerkin.com.

Brick Mold

Our traditional looking brick mold works great for either new construction or retrofit. This fusion welded brick mold has a nail fin for new construction applications and it gives the appearance of authentic wood brick mold with beveled and raised lines. Our brick mold also offers a great opportunity for easily matching and fitting the appearance and openings of older wood windows being replaced.

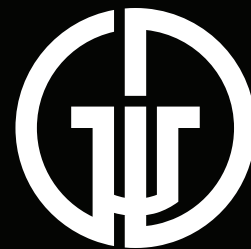

Gerkin Performance

We go to great extremes to make sure our Comfort Series windows and doors perform to a higher standard than basic Energy Star performance ratings. We also offer window packages that meet Energy Stars "Most Efficient Program". However, just meeting Energy Star standards is not enough.

While u-values and solar heat gain performance are very important, the most critical performance factor that can be measured is air infiltration. Air infiltration performance varies greatly among window companies due to the quality of the design and strength of the windows and doors. Air infiltration has the largest impact on overall performance and utility costs. At Gerkin, we design our windows to far exceed Energy Star requirements. In fact, all of windows and doors have air infiltration rates that are at least 600% better than Energy Star requirements! We also independently test our products through the AAMA Gold Label certification program. This ensures every customer is receiving top quality windows and doors that perform their best in air infiltration, water performance and structural integrity. When investing in your home, settle for nothing less than the BEST! Choose Gerkin Windows and Doors.
